

NASAL SANITIZER[®]
NOZASEPTIN[®] FORMULA ADVANCED ANTISEPTIC

ICU PATIENT RELATED PROTOCOL GUIDELINES

We understand that while every facility is different, it can be helpful to have standard protocols as a starting point. For this purpose, the use protocol for Nozin[®] Nasal Sanitizer[®] antiseptic is presented below. For additional protocols, or to answer questions on the protocol below, please contact your local Nozin representative or contact us.

ICU PATIENT PROTOCOL

When to apply	Recommended Protocol
ICU Admission Day 1	3 Nozin [®] applications per day - Popswab [®] ampules or 12 mL bottle with swabs
Subsequent ICU Days	3 Nozin [®] applications per day - Popswab [®] ampules or 12 mL bottle with swabs
After ICU Discharge (optional)	2 Nozin [®] applications per day, at home - Using 12mL bottle with swabs

See instructions for application on page 5 of this brochure. It is recommended that this protocol for ICUs be complemented with daily CHG bathing for the duration of patient stay.

For additional protocols for your facility, please call your local Nozin representative or contact us.
